

Automated Thrombus Analysis Pipeline

Dataset (ROOT/)

loader_functions.py
*load DICOM + NIfTI
*Validate structure
*Geometry checks

feature_extraction.py
*extracts values for the
features and their deltas

histogram_function.py
*Per phase histogram
generation

cluster_plots_stats.py
*cluster creation
*silhouette scoring
*normality and significance testing
*selection of significant features

feature_and_patient_level_overview
*from significant features
*correlation matrices and dendrograms

Outputs
*(CSV ,plots, slices)
